[1]:
```python
# Used Gemini to generate this list, still don't have textbook

# Freezing: 18, 32
# Cold: 45, 50
# Mild: 65, 70
# Warm: 82, 85
# Hot: 98
temperatures = [18, 32, 45, 50, 65, 70, 82, 85, 98]

for t in temperatures:
    if t < 45:
        type = "freezing"
    elif t < 65:
        type = "cold"
    elif t < 82:
        type = "mild"
    elif t < 98:
        type = "warm"
    else: type = "hot"
    print(f"{t} degrees is {type}")
```

```
18 degrees is freezing
32 degrees is freezing
45 degrees is cold
50 degrees is cold
65 degrees is mild
70 degrees is mild
82 degrees is warm
85 degrees is warm
98 degrees is hot
```

1 AI Use Note:

Only used it to generate the list. I know. Super lazy. Could have done it myself.
